

Dusters News

June 2008

Yep, that's **Don Steigman**, and he is almost dwarfed by the size of his latest, a large scale U Can Do.

I am pretty sure that was a Golden Knight Saito I saw hidden under that cowl, and it ran very well for the first flights of this fine looking, and flying airplane.

If you are looking for some exciting video footage of events at Duster field, **Bob-Beardsley** can provide just that.

Shown here with a smoking, large scale Cub and a video camera lashed to the wing. I am told that 1 hour of video can be obtained with this set-up.

June is finally here, and with that the start of summer in Oregon, and the Dusters Bigger Bird Event.

I hope to see you all there, as we take this opportunity to show off Duster Field and share our interests with any who happen by.

Looks like a long weekend with set up beginning Thursday night and the tear down on Sunday afternoon.

Take this opportunity to pitch in, as any amount of time is appreciated and everyone finds it is always well spent.

Just can't wait !!

-jay

The ever pleasant **Mike Ripley** behind his latest, a Hangar 9 Large Scale 182.

I think he said it had a Saito 180 in it, but I am not 100% on that. What I am sure of is the fact that this is one fine looking, and flying, 182. A lot of scale detail, including the operational scale flaps shown below, really make this one stand out. Of course, Mikes impeccable flying skills make it look soooooo easy.
